Infrared clinical thermometer NCT

Unit and controls	
1	Backlight LCD display
2	START button (starts reading and calls up stored data)
3	ON/OFF button
4	Battery compartment
5	Lights
6	Sensor
7	Selector switch (measuring body Q / object □ temperature)

Explanation of symbols

	This instruction manual belongs to this device. It contains important information about starting up and operation. Read the instruction manual thoroughly. Non-observance of these instructions can result in serious injury or damage to the device.
	WARNING These warning notes must be observed to prevent any injury to the user.
	CAUTION These notes must be observed to prevent any damage to the device.
	NOTE These notes give you useful additional information on the installation or operation.
	Classification: Type BF applied part
	LOT number
	Manufacturer
	Date of manufacture

GB SAFETY INSTRUCTIONS

Read the instruction manual carefully before using this device, especially the safety instructions, and keep the instruction manual for future use. Should you give this device to another person, it is vital that you also pass on these instructions for use.

Only use the unit for the specific purpose described in the instruction manual. Any misuse will void the warranty. The unit is not designed for commercial use. Using this thermometer is no substitute for consulting a doctor. The thermometer and the patient must remain in a stable environment for at least 30 minutes before measuring the temperature. This device is not designed to be used by persons (including children) with limited physical, sensory or mental abilities, or by persons with insufficient experience and/or knowledge, unless under observation by a person responsible for their safety, or unless they have been instructed in the use of the device. Children must be supervised to ensure that they do not play with the device. The temperature in the forehead and temple area differs from the internal temperature, which is taken orally or rectally. Vasoconstriction, an effect which constricts the blood vessels and cools the skin, can occur during the early stages of a fever. In this case, the temperature measured by the NCT thermometer may be unusually low. If the measurement therefore does not match the patient's own perception or is unusually low, repeat the measurement every 15 minutes. As a reference, you can also measure the internal body temperature using a conventional oral or rectal thermometer. A control measurement using a conventional thermometer is recommended in the following cases:

- If the reading is surprisingly low
 - For new-born infants up to 100 days old
 - For children under three years of age who have a weakened immune system or who react unusually in the presence or absence of fever
 - If you are using the thermometer for the first time or want to familiarise yourself with it
 - Babies' skin reacts very quickly to the ambient temperature. Therefore, do not take their temperature with the NCT thermometer during or after breastfeeding, because the skin temperature may then be lower than the internal body temperature.
- If a fault occurs or the unit is damaged, do not attempt to repair the unit yourself, as this will void the warranty. Contact your dealer and only have repairs carried out by authorized service partners.
- Do not use the thermometer if it is damaged.
- Do not open up the device. It contains small parts which might be swallowed by children.
- Do not use the thermometer in damp environments.
- Do not immerse the thermometer in water or other liquids. It is not watertight.
- For cleaning, follow the instructions in Cleaning and maintenance.
- Do not shake or tap the thermometer. Do not drop it.
- Protect the device from direct sunlight, extremely high or low temperatures, dirt and dust.
- If the thermometer is not going to be used for a long period, remove the batteries.

WARNING - The measurement results obtained by this thermometer do not represent a diagnosis and do not replace the consultation of a doctor, who should always be consulted in case of doubt.

Items supplied and packaging

Please check first of all that the device is complete and is not damaged in any way. In case of doubt, do not use it and contact your dealer or your service centre. The following parts are included:

- 1 medisana Infrared clinical thermometer NCT
- 2 Batteries (AAA type, LR03) 1,5V (already inserted!)
- 1 Storage box
- 1 Instruction manual

The packaging can be reused or recycled. Please dispose properly of any packaging material no longer required. If you notice any transport damage during unpacking, please contact your dealer without delay.

WARNING - Please ensure that polythene packing is kept away from the reach of children! Risk of suffocation!

Taking a temperature reading - quickly and accurately!

The medisana NCT infrared clinical thermometer allows precise, contact-free measurement of body temperature (at a distance of approximately 5 cm). The temperature is taken above the eyebrow between the forehead and the temple. The value of the energy radiated there is measured and converted to a temperature value. The reading is displayed within 1 second. This enables you, for example, to take babies' temperature without disturbing their sleep.

Additional function

Apart from measuring body temperature, the NCT infrared thermometer from medisana can also be used to measure the temperature of objects (e.g. fluids, surfaces, ambient temperature). The temperature range for this function is between 0° and 100° Celsius (32°F-212°F).

BATTERY SAFETY INFORMATION

Do not disassemble batteries!

Clean the battery and device contacts if necessary before putting in the batteries!

Remove discharged batteries from the device immediately!

Increased risk of leakage, avoid contact with skin, eyes and mucous membranes! If battery acid comes in contact with any of these parts, rinse the affected area with copious amounts of fresh water and seek medical attention immediately!

If a battery has been swallowed seek medical attention immediately!

Replace all of the batteries simultaneously!

Only replace with batteries of the same type, never use different types of batteries together or used batteries with new ones!

Insert the batteries correctly, observing the polarity!

Keep the battery compartment well sealed!

Remove the batteries from the device if it is not going to be used for an extended period!

Keep batteries out of children's reach!

Do not attempt to recharge these batteries! There is a danger of explosion!

Do not short circuit! There is a danger of explosion!

Do not throw into a fire! There is a danger of explosion!

Keep unused batteries in their packaging away from metal objects in order to prevent short circuiting!

Do not throw used batteries into the household refuse; put them in a hazardous waste container or take them to a battery collection point, at the shop where they were purchased!

CE0044

Removing / inserting batteries

The medisana NCT infrared thermometer comes with the batteries installed. However, if the battery symbol appears in the LC display after a certain period of use, you must replace them with two new 1.5 V batteries (LR03, AAA).

Removal:

Slide the lid of the battery compartment cover downwards and take the cover off. Take out the batteries.

Insertion:

Put in two new 1.5 V batteries (LR03, AAA). Make sure the batteries are the right way around (see the diagram in the battery compartment). Put the battery compartment cover back on and move it upwards until it locks into position.

Before use

Acclimatise the thermometer to the temperature of the room: For an accurate reading of a patient's temperature, their body must first acclimatise to the temperature of the room where the measurement will be made. The same applies to the NCT infrared thermometer. When taken somewhere else, it automatically adjusts itself to the new environment. The thermometer takes a certain amount of time to equalise its own temperature to that of the room. This depends on the difference between the two temperatures and can take more than 30 minutes. Precise readings can only be taken once this process is completed.

Change the unit of measurement

You may measure the body temperature in °C (Celsius) or °F (Fahrenheit). This is how to do it:

The unit must be switched off.

Press and hold the START-button ① for at least 5 seconds, until the current selected unit of measurement is displayed. Another short press on the START-button ① changes the unit of measurement. When the desired unit is displayed, wait until all symbols are displayed. Now the thermometer is ready for the measurement in the new selected unit of measurement.

Additionally all saved measurements are adjusted automatically according to the newly selected unit of measurement.

Measuring body temperature

NOTES, for the most accurate readings:

The thermometer and the patient must remain in a stable environment for at least 30 minutes before measuring the temperature.

Do not take a baby's temperature during or directly after breastfeeding.

Do not use the thermometer in damp environments.

Patients should not drink or eat directly before or during a measurement, and they should avoid any physical exertion.

Clean the area where you are taking the temperature and remove any dirt, hairs or sweat before moving the sensor ② to the measuring position.

Do not remove the thermometer from the measuring position until it has beeped to signal the end of the reading.

If the sensor ② becomes dirty during or after a reading, clean it with a cotton bud dipped in cleaning alcohol before putting the thermometer away.

Always take the temperature in the same place, because the readings will vary in different environments.

A control measurement using a conventional thermometer is recommended in the following cases:

If the reading is surprisingly low,

For new-born infants up to 100 days old,

For children under three years of age who have a weakened immune system or who react unusually in the presence or absence of fever,

If you are using the thermometer for the first time or want to familiarise yourself with it.

The thermometer has been clinically tested, and its safety and accuracy inspected and confirmed, provided it is used in accordance with these instructions.

Move the selector switch ⑦ to the top position to select body temperature measurement mode ⑧.

Press the ON/OFF button ③. The LC display ① is activated. The thermometer performs a self-test, where all the display symbols are shown in succession.

Finally, the last registered reading is displayed along with the M symbol (M = memory) for 2 seconds.

When you hear a short beep and the symbol for the measuring unit °C is shown, the thermometer is ready for use.

To begin the measurement, point the sensor ② at the middle of the patient's forehead at a distance of no more than 5 cm. If the patient's forehead has hair, sweat or dirt on it, remove this first so that the reading is as accurate as possible.

Press and hold the START button ④. The blue light ⑤ switches on to illuminate the area where you are taking the measurement.

Now move the thermometer smoothly over the patient's eye-brow from the forehead to the temple to measure the maxim temperature. While the sensor scans this area, you will hear a long beep to indicate that the maximum temperature has been recorded.

As soon as this happens, release the START button ④.

- If the reading is below the fever level, you will hear a long beep and the backlight of the display will be green.

- If the reading is at or above the fever level (37.8°C resp. 100°F), you will hear 10 short beeps, and the backlight of the display will be red to indicate that the patient may have a fever.

When the °C symbol flashes again after 2 seconds, the thermometer is ready for another reading.

Measuring the temperature of an object

Move the selector switch ⑦ to the bottom position to select object temperature measurement mode ⑨.

Press the ON/OFF button ③. The LC display ① is activated. The thermometer performs a self-test, where all the display symbols are shown in succession.

Finally, the last registered reading is displayed along with the M symbol (M = memory) for 2 seconds.

When you hear a short beep and the °C symbol flashes, the thermometer is ready to take the measurement.

To begin the measurement, point the sensor ② at the middle of the object at a distance of no more than 5 cm. If it has water, dust or dirt on it, remove this first so that the reading is as accurate as possible.

Press the START button ④. The blue light ⑤ switches on and the temperature is measured. The measurement is accompanied by a series of beeps.

Release the START button ④ after a few seconds. A long beep indicates the end of the measurement. Remove the sensor ② from the measuring position. The display shows the measured temperature.

Recalling stored data

The medisana NCT infrared thermometer can store up to 30 results. You can call up your stored data with a short press of the START button ④, without having previously switched on the thermometer with the ON/OFF button ③. The symbol M will flash on the display next to "----". After a further short press of the START button ④, memory slot number 1 will appear in the unit display, followed directly by the last stored temperature reading. The symbol M will flash below the unit of measurement. With a further press of the START button ④, you can call up the result stored in memory slot "2". A total of 30 memory slots are available, and these will be displayed in order if you continue to press the START button ④. If a memory slot is empty, the symbol "----" will appear next to it in the display.

Error messages

Display

Description

The measured temperature is too high. H appears in the display if the reading is above 40°C / 108°F (body mode) or 100°C / 212°F (object mode).

The ambient temperature is too low. L appears in the display if the reading is below 34°C / 93.2°F (body mode) or 0°C / 32°F (object mode).

The ambient temperature is too high. The ambient temperature is above 40°C / 104°F (body and object mode).

The ambient temperature is too low. The ambient temperature is below: 15°C / 59°F (body mode) or 5°C / 41°F (object mode).

Error indication in the display. A malfunction has occurred. You hear 3 short beeps.

Blank display. Check the position of the battery.

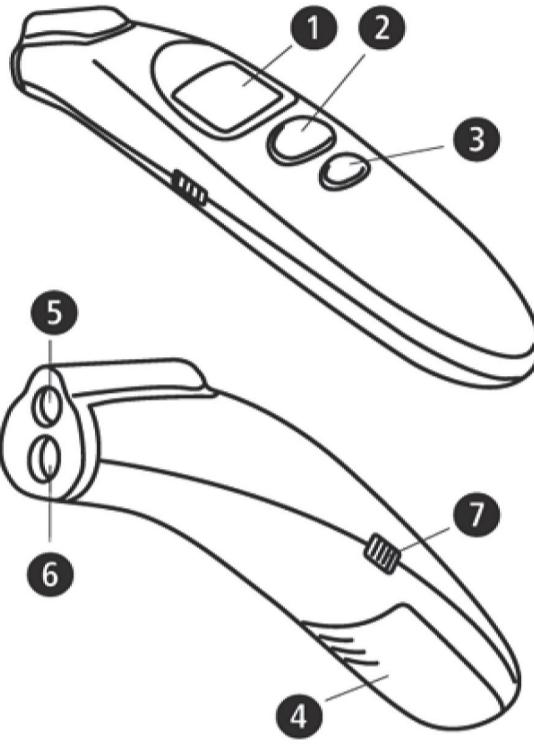

Flat battery indicated. Insert a new battery.

Cleaning and maintenance

- The sensor is the most delicate part of the medisana NCT infrared thermometer. Protect it from dirt and damage. Clean the sensor with a cotton bud dipped in warm water or 70% isopropyl alcohol.
- Do not immerse the thermometer in water or any other liquid. It is not watertight.
- To clean the thermometer, use a soft cloth slightly dampened with mild soapy water or 70% isopropyl alcohol. Do not let water get into the unit. Only use the unit again when completely dry.
- Never use aggressive cleaning agents, thinners, benzine or tough brushes.
- Take care not to scratch the lens of the sensor, the display or the housing.
- Do not use or store the unit in an environment where the ambient temperature or humidity is too high or too low (see operating conditions in the "Technical specifications"

Keterangan simbol

- AMARAN**
Nota amaran ini adalah untuk peranti ini. Mengandungi maklumat penting tentang memulakan peranti dan pengendaliannya. Baca manual arahan ini dengan teliti. Kegagalan mematuhi arahan boleh menyebabkan kecederaan serius atau kerosakan pada peranti.
- BERJAGA-JAGA**
Nota ini mestilah dipatuhi untuk mengelakkan sebarang kecederaan serius atau kerosakan pada peranti.
- NOTA**
Nota ini memberi anda maklumat tambahan berkaitan pemasangan atau pengendalian.
- Pengelasan:** Bahagian berkaitan jenis BF
- LOT**
- Pengeluar**
- Tarikh pengeluaran**

MS MAKLUMAT KESELAMATAN

Baca manual arahan dengan teliti sebelum menggunakan peranti ini, terutamanya arahan keselamatan, dan simpan manual arahan ini untuk kegunaan di masa hadapan. Jika anda menyerahkan peranti ini kepada orang lain, anda mesti menyerahkan arahan penggunaan ini juga.

Gunakan unit ini untuk tujuan khusus seperti yang dijelaskan dalam manual arahan sahaja. Sebarang penyalahgunaan akan membatalkan waranti.

Unit ini tidak direka untuk kegunaan komersil.

Penggunaan termometer ini tidak boleh menggantikan nasihat doktor.

Termometer dan pesakit mesti tetap berada dalam persekitaran yang stabil selama sekurang-kurangnya 30 minit sebelum mengukur suhu.

Peranti ini tidak direka untuk digunakan oleh orang (termasuk kanak-kanak) yang terbatas keadaan fizikal, deria atau kebolehan mental mereka, atau oleh orang yang kurang berpengalaman dan/atau pengetahuan, kecuali di bawah pengawasan orang yang bertanggungjawab ke atas keselamatan mereka, atau jika mereka telah dilarahkan untuk menggunakan peranti ini.

Kanak-kanak perlu dipantau untuk memastikan mereka tidak bermain dengan peranti ini.

Suhu di kawasan dahai dan pelipis berbeza dengan suhu dalaman yang diukur melalui mulut atau rektum. Pencerutan vena, kesan yang menyempitkan salur darah dan menyekukan kulit boleh berlaku semasa peringkat awal seseorang mengalami demam. Dalam keadaan ini, suhu yang diukur menggunakan termometer NCT ini mungkin luar biasa rendah. Jika ukuran tidak seperti yang dijangka oleh pesakit atau luar biasa rendah, ulang pengukuran setiap 15 minit. Untuk perbandingan, anda juga boleh mengukur suhu dalaman badan menggunakan termometer oral atau rektum konvensional. Pengukuran yang terkawal menggunakan termometer konvensional disarankan untuk keadaan-keadaan berikut:

Jika bacaan luar biasa rendah.

Untuk bayi baru dilahirkan sehingga berumur 100 hari

Kanak-kanak di bawah umur tiga tahun yang mempunyai sistem imun yang lemah atau yang bertindak balas di luar kebiasaan sama ada mengalami demam atau tidak.

Jika anda menggunakan termometer untuk pertama kali atau mahu membiasakan diri

Kulit bayi sangat cepat bertindak balas dengan suhu persekitarannya. Oleh itu, jangan ukur suhu mereka menggunakan termometer NCT semasa atau selepas disusukan, kerana suhu kulit mereka mungkin lebih rendah daripada suhu dalaman badan.

Jika terdapat masalah atau unit ini rosak, jangan cuba membaikinya sendiri, kerana ia akan membatalkan waranti. Hubungi pembekal anda dan dapatkan khidmat pusat perkhidmatan yang sah sahaja untuk membaikinya.

Jangan gunakan termometer jika ia rosak.

Jangan buka peranti. Ia mengandungi bahagian kecil yang boleh ditelan oleh kanak-kanak.

Jangan gunakan termometer dalam persekitaran yang lembap.

Jangan tenggelamkan termometer di dalam air atau cecair lain. **Itu tidak kedap air.**

Untuk pembersihan, ikut arahan dalam **Pembersihan dan penyelenggaraan.**

Jangan goncang atau ketik termometer. Jangan jatuhkannya.

Lindungi peranti daripada cahaya matahari terus, suhu yang terlalu tinggi atau sejuk, kekotoran dan habuk.

Jika termometer tidak akan digunakan untuk jangka masa yang lama, keluarkan bateri.

AMARAN - Bacaan ukuran yang diperolehi oleh termometer ini bukanlah diagnosis dan tidak boleh menggantikan nasihat doktor, yang sentiasa perlu dirujuk jika anda berasa rugi.

Items supplied and packaging

Please check first of all that the device is complete and is not damaged in any way. In case of doubt, do not use it and contact your dealer or your service centre. The following parts are included:

- 1 medisana Infrared clinical thermometer NCT
- 2 Batteries (AAA type, LR03) 1.5V (already inserted!)
- 1 Storage box
- 1 Instruction manual

The packaging can be reused or recycled. Please dispose properly of any packaging material no longer required. If you notice any transport damage during unpacking, please contact your dealer without delay.

AMARAN - Sila pastikan pembungkus politena disimpan jauh daripada capaian kanak-kanak! Berisiko untuk terjerut!

Mengukur suhu - cepat dan tepat!

Termometer klinikal inframerah NCT medisana membolehkan pengukuran suhu badan yang tepat tanpa sentuhan (pada jarak lebih kurang 5 cm). Suhu diukur di atas kening di antara dahi dan pelipis. Nilai tenaga yang dipancarkan di bahagian ini diukur dan ditukar kepada nilai suhu. Bacaannya dipaparkan dalam masa 1 saat. Ini membolehkan anda mengukur suhu bayi tanpa mengganggu tidurnya, sebagai contoh.

Fungsi tambahan

Selain mengukur suhu badan, termometer inframerah NCT daripada medisana juga boleh digunakan untuk mengukur suhu objek (cth cecair, permukaan, suhu persekitaran). Julat suhu untuk fungsi ini ialah antara 0° dan 100° Celsius (32°F - 212°F).

MAKLUMAT KESELAMATAN BATERI

Jangan ceraikan bateri!

Bersihkan bateri dan tempat sentuhannya pada peranti jika perlu sebelum memasukkan bateri!

Keluarkan bateri yang telah kehabisan kuasa dengan segera!

Risiko kebocoran meningkat, ekalkan sentuhan dengan kulit, mata dan membran mukosa! Jika asid bateri bersentuhan dengan mana-mana bahagian ini, bilas kawasan yang terjejas dengan air bersih yang banyak dan dapatkan rawatan dengan segera!

Jika tertelan bateri, datarkan rawatan dengan segera!

Gantikan semua bateri pada masa yang sama!

«Gantikan bateri dengan jenis yang sama sahaja, jangan sekali-kali gunakan bateri berlainan jenis pada masa yang sama atau menggunakan bateri lama bersama dengan yang baru!

Masukkan bateri dengan betul, perhatikan kutubnya!

«Pastikan tempat bateri tertutup rapat!

Keluarkan bateri daripada peranti jika ia tidak akan digunakan untuk jangka masa yang lama!

Simpan bateri jauh daripada kanak-kanak!

Jangan cuba untuk mengecas semula bateri! Terdapat bahaya letupan!

Jangan gunakan litar pintas! Terdapat bahaya letupan!

Simpan bateri yang tidak digunakan di dalam bungkusannya, jauh daripada objek logam untuk mengelakkan litar pintas!

Jangan buang bateri ke dalam sampah isi rumah; letakkan di dalam bekas sisir berbahaya atau serahkan kepada pusat pengurusan bateri, kedai yang menjualnya!

CE0044

Memasukkan / mengeluarkan bateri

Termometer inframerah NCT medisana sudah pun dibekalkan bersama bateri yang telah dipasangkan. Walau bagaimanapun, jika simbol bateri tertera pada paparan LC selepas satu jangka waktu, anda perlu menukar dengan bateri 1.5 V (LR03, AAA) yang baru.

Pengeluaran:

Luncurkan penutup kompartmen bateri ke bawah dan tanggalkan penutup itu. Keluarkan bateri.

Memasukkan:

Masukkan dua bateri 1.5 V (LR03, AAA) yang baru. Pastikan kedudukan bateri adalah betul (rujuk rajah dalam tempat bateri). Letakkan semula penutup kompartmen bateri dan gerakkan ke atas sehingga terkunci dalam kedudukannya.

Sebelum penggunaan

Sesuaikan termometer dengan suhu bilik: Untuk ukuran tepat suhu pesakit, badan mereka perlu terlebih dahulu disesuaikan dengan suhu bilik tempat suhu akan diukur. Begitu juga dengan termometer inframerah NCT. Apabila beralih ke tempat lain, ia tersusun secara automatik dengan persekitaran yang baharu. Termometer mengambil masa untuk menyemangatkan suhuannya dengan suhu bilik. Ini bergantung kepada perbezaan suhu kedua-duanya dan boleh mengambil masa sehingga lebih daripada 30 minit. Bacaan yang tepat hanya boleh dibuat setelah proses ini selesai.

Tukar unit ukuran

Anda boleh mengukur suhu badan dalam °C (Celsius) atau °F (Fahrenheit). Cara menggunakan:

Unit itu mesti dimatikan.

Tekan dan tahan butang **START** ② selama sekurang-kurangnya 5 saat, sehingga unit ukuran semasa yang dipilih dipaparkan.

Tekan sekali lagi butang **START** ② akan mengubah unit ukuran. Apabila unit yang diingini sudah dipaparkan, tunggu sehingga semua simbol dipaparkan. Kini termometer ini sudah sedia untuk pengukuran dalam unit pengukuran baharu yang dipilih.

Sebagai tambahan, semua ukuran yang disimpan dilaraskan secara automatik mengikut unit ukuran yang baru dipilih.

Mengukur suhu badan

NOTA For the most accurate readings:

Termometer dan pesakit mesti tetap berada dalam persekitaran yang stabil selama sekurang-kurangnya 30 minit sebelum mengukur suhu.

Jangan ukur suhu bayi semasa atau sebaik sahaja selepas disusukan.

Jangan gunakan termometer dalam persekitaran yang lembap.

Pesakit dilarang makan atau minum sebaik sahaja sebelum atau semasa pengukuran, dan mereka perlu mengelakkan penggunaan tenaga fizikal yang banyak.

Bersihkan bahagian tempat ukuran suhu akan diambil dan singkirkan sebarang kekotoran, rambut atau peluh sebelum meletakkan sensor ④ di tempat pengukuran.

Jangan alihkan termometer dari tempat pengukuran sehingga kedengaran bunyi bip menandakan pengukuran telah selesai.

Jika sensor ④ kotor semasa atau selepas pengukuran, bersihkan ia menggunakan putik kapas yang dicelup ke dalam alkohol bersih sebelum mengukur.

Sentiasa ukur suhu di tempat yang sama kerana bacaan berbeza di persekitaran yang berbeza.

Pengukuran yang terkawal menggunakan termometer konvensional disarankan untuk keadaan-keadaan berikut:

Jika bacaan luar biasa rendah,

Untuk bayi baru dilahirkan sehingga berumur 100 hari,

Kanak-kanak di bawah umur tiga tahun yang mempunyai sistem imun yang lemah atau yang bertindak balas di luar kebiasaan sama ada mengalami demam atau tidak,

Jika anda menggunakan termometer untuk pertama kali atau mahu membiasakan diri

Jika bacaan luar biasa rendah,

Untuk bayi baru dilahirkan sehingga berumur 100 hari,

Kanak-kanak di bawah umur tiga tahun yang mempunyai sistem imun yang lemah atau yang bertindak balas di luar kebiasaan sama ada mengalami demam atau tidak,

Jika anda menggunakan termometer untuk pertama kali atau mahu membiasakan diri

Termometer telah diuji secara klinikal, keselamatan dan ketepatannya telah diperiksa dan disahkan, dengan syarat ia digunakan mengikut arahan.

Gerakkan suis pemilih ① ke posisi atas untuk memilih mod pengukuran suhu badan Q.

Tekan butang **ON/OFF** ②. Paparan LC ① diaktifkan. Termometer akan melakukan ujian kendiri, semua simbol paparan akan tertera secara berturut-turut.

Ahrik sekali, bacaan lepas yang terakhir direkodkan akan dipaparkan bersama simbol M (M = memori) selama 2 saat.

Apabila anda mendengar bunyi bip pendek dan simbol untuk unit pengukuran °C ditunjukkan, termometer itu sudah sedia digunakan.

Untuk memulakan pengukuran, halakan sensor ④ ke bahagian tengah dahi pesakit pada jarak tidak lebih daripada 5 cm. Jika terdapat rambut, peluh atau kotoran pada dahi pesakit, bersihkannya terlebih dahulu supaya ukuran tepat akan diperolehi.

Tekan butang **START** ② secara berterusan. Cahaya biru ③ menyala untuk menerangkan kawasan tempat anda sedang mengambil ukuran.

Sekarang gerakkan termometer perlahan-lahan merentasi kening dari dahi ke pelipis untuk mengukur suhu maksimum. Semasa sensor mengimbang kawasan ini, anda akan mendengar bunyi bip panjang yang menunjukkan suhu maksimum telah direkodkan.

Sebaik sahaja ini berlaku, lepaskan butang **START** ②.

- Jika bacaan adalah di bawah tahap demam (37.8°C atau 100°F), anda akan mendengar 10 bunyi bip pendek, dan cahaya latar pada paparan akan menjadi merah untuk menunjukkan bahawa pesakit mungkin mengalami demam.

- Apabila simbol °C berkelpi lagi selepas 2 saat, termometer sudah bersedia untuk bacaan seterusnya.

Gerakkan suis pemilih ① ke bahagian bawah untuk memilih mod pengukuran suhu objek □.

Tekan butang **ON/OFF** ②. Paparan LC ① diaktifkan. Termometer akan melakukan ujian kendiri, semua simbol paparan akan tertera secara berturut-turut.

Ahrik sekali, bacaan terakhir yang direkodkan dipaparkan bersama simbol M (M = memori) selama 2 saat.

Apabila anda mendengar bunyi bip pendek dan simbol untuk unit ukuran °C berkelpi, termometer sudah sedia untuk mengambil ukuran.

Untuk memulakan pengukuran, halakan sensor ④ ke bahagian tengah objek pada jarak tidak lebih daripada 5 cm. Jika terdapat air, habuk atau kotoran pada objek, bersihkannya terlebih dahulu supaya ukuran tepat akan diperolehi.

Tekan butang **START** ②. Cahaya biru ③ menyala dan suhu diukur. Pengukuran diiringi dengan bunyi bip pendek
